Admin User Guide

How to navigate and manage the Abber platform

For platform administrators · August 2026

1. Signing In

1. Go to `/admin/login` (e.g. `https://abber.netlify.app/admin/login`).
2. Enter your admin email and password, then click **Sign In to Admin**.
3. You land on the Admin Dashboard at `/admin`.

- The first admin account is created automatically when the backend starts, using `ADMIN_EMAIL` (default `admin@abber.local`) and `ADMIN_PASSWORD`. Seeding is skipped if the password is missing or shorter than 8 characters.
- To sign out, use **Sign Out** at the bottom of the sidebar.

> **Note:** Accounts without the ADMIN role are rejected on this page and logged out. Regular members must use `/login`.

2. Navigating the App

A sidebar on the left contains all pages; the highlighted item is where you are. Collapse it with the panel icon at its top.

Sidebar link	Purpose
Admin Dashboard	Your control centre (`/admin`) — admins only.
Mentees	Review assigned founders' progress and leave notes (`/mentor`) — admins and mentors.
Dashboard / My Ideas / Chat	Regular member pages (admins have access too).
Mentors / Messages / Settings	"Coming soon" placeholders.
Sign Out	Ends your session.

The top-right profile menu also offers Settings and Sign Out. A floating AI chat assistant sits in the bottom-right corner.

3. The Admin Dashboard

Four tabs organise everything. Use the **Refresh** button to reload data at any time.

Overview tab

- KPI cards: total users, mentors, mentees, admins, ideas, roadmaps, milestones completed, average progress, registrations today, logins today.
- Charts: ideas by stage, and registrations over the last 7 days.

Mentors tab

- Cards show each mentor's specialty, availability, mentee count, experience, company and location.
- **Add Mentor** creates an account + public profile (see Section 4).

Users tab

A table of every account: name, email, roles, ideas, progress %, milestones, active/verified status, last login, join date, and actions.

Activity Logs tab

Newest-first feed of logins, registrations, idea submissions, role changes, assignments and milestone completions — useful as an audit trail.

4. Managing Mentors

Add a mentor

1. **Mentors tab → Add Mentor.**
2. Fill name, email and a temporary password (min. 8 characters), plus optional profile details (specialty, experience, company, location, bio).
3. Tick "*Feature on the landing page*" if they should appear publicly, then click **Add Mentor**.

Share the temporary password privately and ask the mentor to change it after first login.

Assign a founder to a mentor

1. Click **Manage Mentees & Assign** on the mentor's card.
2. Select an unassigned founder from the dropdown and click **Assign**.

Remove an assignment

In the same window, click **Unassign** next to the founder's name.

5. Managing Users

In the **Users tab**, each row has an Actions button:

- **Grant Mentor** — gives the user mentor access (blue MENTOR badge appears).
- **Revoke Mentor** — removes mentor access; the user keeps their normal member account.

> **Tip:** Before revoking a mentor, unassign their founders first so no one is left without a mentor.

6. Advising Founders (Mentees Page)

1. Open **Mentees** in the sidebar and click a founder to open their roadmap.
2. Review milestones by status (Completed, In Progress, Submitted, Locked).
3. Use the pencil icon on any milestone to write guidance notes, then click **Save**.

7. Troubleshooting

Problem	Fix
"This account does not have admin access"	Wrong portal for that account — it needs the ADMIN role.
"Invalid admin credentials"	Wrong email/password, or the seeded admin was never created (check ADMIN_PASSWORD was set before backend start).
"Failed to load admin data" banner	Backend unreachable or session lost rights — press Refresh; verify the API is running.
Add Mentor rejects password	Password must be at least 8 characters.
Assignment dropdown is empty	All founders already have mentors (or none exist yet).
Data looks outdated	Press **Refresh**; lists load once per page visit.
